

Job Description

Apply for a highly sought-after position as a Data Scientist/GenAI LLM Engineer at Wood Mackenzie. Join our dynamic team, where we deliver cutting-edge projects to global leaders in the energy sector, focusing on how we power the planet.

At Wood Mackenzie, we specialise in harnessing the power of AI and machine learning technologies to unlock the value hidden within structured and unstructured data, enabling our clients to maximise the potential of their enterprise information.

As a GenAI/LLM Engineer, you will apply your profound knowledge of GenAI/LLM technologies. Your main responsibilities will include working closely with clients to conceptualise, create, test, and implement products utilising GenAI/LLM technology on a significant scale. Moreover, you will play a crucial role in refining the parameters of LLM models, enhancing their setup to guarantee superior model performance and deliver beneficial results for our clients. Come join us and be a pioneer in advancing AI and machine learning solutions within the energy industry..

Main Responsibilities

Working within a team of AI Engineers you'll contribute to all technical aspects of the team responsibilities, including writing, testing, and delivering robust pipelines and processes which feed data into Wood Mackenzie's Lens Platform.

Using established patterns with Python, AWS, and a bespoke Data Platform you'll be working with senior members of the team to deliver key pieces of work, while continually looking to improve existing technical approaches as well as prototyping and operationalising new patterns and processes.

Qualifications

- Experience in Python and SQL, with other languages such as R or PySpark desirable.
- Experience with SQL and NoSQL (e.g., Postgres, Aurora, SQL Server, Oracle, Neo4j) databases.
- Demonstratable experience with modern ETL tools (e.g., AWS Glue, AWS Step Functions, Kafka etc.).
- DevOps experience around continuous delivery and approaches to continuous integration (Jenkins, Docker, CloudFormation/Terraform).
- Applied experience working in a team of engineers, to design, implementation, and maintain modern data pipelines.

Expectations

- Excellent problem solving, and analysis skills coupled with great communication skills.

- Strong organization and planning skills, with the ability to manage multiple priorities simultaneously.
- A strong attention to detail.
- Commitment to excellence and meeting high quality standards expected by our clients.
- Experience in working in different delivery methodologies and an understanding of their benefits/constraints.
- We are a hybrid working company and the successful applicant will be expected to be physically present in the office at least 2 days per week to foster and contribute to a collaborative environment, but this may be subject to change in the future.
- Due to the global nature of the team, a degree of flexible working will be required to accommodate different time zones.

Leadership

- Contribute to a culture of product development where solving problems for our customers is the highest priority.
- Communicate effectively across functions as required.

Collaboration

- Work in collaboration with team members to perform scoping, estimation, and technology feasibility tasks for the intended solution.
- Manage dependencies among engineering activities and constantly monitor, assess, and control the technical execution.
- Address technical queries and elicit, prioritize, and negotiate changes to requirements and defects.
- Contribute to system and data issue identification and resolution within teams across the organization.

Quality

- Promote a culture of code quality and continuous improvement.
- Drive the importance of data accuracy from internal and external sources.

Wood Mackenzie Values

- Inclusive – we succeed together.
- Trusting – we choose to trust each other.
- Customer committee – we put customers at the heart of our decisions.
- Future Focused – we accelerate change.
- Curious – we turn knowledge into action.
